# MXN-AMP Microflex® PoE-Powered Amplifier

## Shure MXN-AMP Setup Videoconferencing Room Equipment

Your MXN-AMP is one part of a complete room system for videoconferencing. It's helpful to think about all the parts of your room system as you get started setting up the MXN-AMP.

A standard room includes some or all of this equipment:

- Microphone(s)
- DSP or other processor
- Loudspeakers (networked or analog)
- Computer with videoconferencing software
- Network switch
- Camera
- Amplifier(s)
- Accessories such as table mute buttons, tablets to control meetings, and other peripherals

The [Microflex Ecosystem](#) offers a complete portfolio of networked audio solutions that can be precisely tailored to your needs.

## What Software Do I Need to Set Up This Amplifier?

Install this software on a computer that connects to the same network as the amplifier:

- **Control software** to adjust amplifier and passive loudspeaker settings. This amplifier has 2 options:

### Option 1: [Shure Designer](#)

- Use for managing lots of Shure devices in 1 place
- Control Shure devices and route audio between them

- Create rooms to manage devices and design coverage

**Option 2:** Web application (open using [the Shure Update Utility](#))

- Use to manage each Shure device separately
- Control each device individually with its web application
- Route audio using [Dante Controller](#)
- **Dante Controller** to route audio signals among other Dante devices. Not necessary if you're only routing audio to Shure devices in Designer.
- **Shure Update Utility** to update firmware on Shure devices and to find device web applications (download at [shure.com/suu](#))

## MXN-AMP Designer Setup Example

This example uses Shure Designer software to set up an MXN-AMP, an MXA901-R, an ANIUSB-MATRIX, and 2 MXP-1 loudspeakers. You can use other combinations of devices with MXN-AMP, but the setup in Designer is similar. You might use Designer if:

- You're managing many Shure devices in different spaces
- You're routing audio between many Shure devices

After this setup process, you should be able to:

- Access the MXN-AMP in Designer
- Adjust settings for the MXN-AMP and passive loudspeakers connected to the amplifier in Designer
- Adjust DSP and route audio between Shure networked devices
- Understand the basic workflow for working with devices in Designer

**This example uses:**

- Cat5e (or better) Ethernet cable
- Loudspeaker cable
- Network switch that provides Power over Ethernet Plus (PoE+)
  - **Note:** You can [power this amplifier with PoE or PoE+](#).
- Computer with [Shure Designer 6 software](#)
- Computer with videoconferencing software
- MXA901-R
- ANIUSB-MATRIX
- 2 MXP-1 loudspeakers

## 1. Install and Connect

1. [Install the MXN-AMP](#) and other devices. Connect networked audio devices to PoE or PoE+ ports on the network switch using Ethernet cable.
2. Connect the MXP-1 loudspeakers to the amp's block connectors with loudspeaker cable.
3. Connect the computer running Designer to the same network.

## 2. Route Audio in Designer

The easiest way to route audio in Designer is with Designer's auto route feature. This feature routes audio signals, applies DSP settings, turns on mute synchronization, and enables LED control for connected devices.

1. Open Designer. Check that you're connected to the correct network in File > Designer preferences.
2. Open a new design and drag the networked audio devices into the design.
3. Select Auto route. Designer optimizes routing and device settings for your equipment combination. If you remove or add devices, select Auto route again.

You can also route audio manually in Designer or use Dante Controller.

4. Check the audio routes, matrix mixer routes, the amplifier's loudspeaker output settings, and other settings to make sure they fit your needs.

5. Select Deploy and connect to send the settings to the installed devices. Designer walks you through associating the design devices with online devices.

### 3. Listen and Adjust

1. Connect the computer with videoconferencing software (such as Zoom or Microsoft Teams) to the ANIUSB-MATRIX's USB port.

2. Open the videoconferencing software on the computer connected to the ANIUSB-MATRIX. In the settings, choose ANIUSB-MATRIX as the speaker and microphone.
3. Place a test call with the whole system and have the far-end caller tell you how your microphone signal sounds. Adjust mic gain, EQ, or DSP in the microphone's IntelliMix tab. Adjust far-end signal gain, EQ, or DSP in the MXN-AMP's output or schematic tabs.

### Route Many MXN-AMPs

In the Shure Designer software, you can [auto route](#) :

- 1 amplifier with ANIUSB-MATRIX
- 2 or more amplifiers with P300 or IntelliMix Room

To route more amplifiers from the ANIUSB-MATRIX in Designer, [route manually](#).

## MXN-AMP Web Application Setup Example

This example uses device web applications and Dante Controller to connect an MXN-AMP, an MXA901-R, an ANIUSB-MATRIX, and 2 MXP-1 loudspeakers. You might use web applications and Dante Controller if:

- You don't have many Shure devices to manage
- You need to route audio to third-party Dante devices

After this setup process, you should be able to:

- Open the MXN-AMP's web application
- Adjust settings and route audio in Dante Controller

**This example uses:**

- Cat5e (or better) Ethernet cable
- Loudspeaker cable
- Network switch that provides Power over Ethernet (PoE) or PoE+
  - **Note:** You can [power this amplifier with PoE or PoE+](#).
- Computer with [Shure Update Utility](#) and Dante Controller software
- 2 MXP-1 loudspeakers
- ANIUSB-MATRIX

## Step 1: Install and Connect

1. [Install the MXN-AMP](#) and other devices. Connect networked audio devices to PoE or PoE+ ports on the network switch using Ethernet cable.
2. Connect MXP-1 loudspeakers to the amp's block connectors with loudspeaker cable.
3. Connect the computer running Shure Update Utility and Dante Controller to the same network.
4. Open Shure Update Utility. Find the MXN-AMP in the list of devices. Double-click the amp's IP address to open its web application or right-click to copy and paste the IP address into your browser.

## Step 2: Route Audio

Use Dante Controller to route audio to and from other Dante devices. We'll route signal from the ANIUSB-MATRIX to the MXN-AMP for this example.

1. Open Dante Controller and find your devices in the list of transmitters and receivers.
2. Make these routes:
  - MXA901 automix output to ANIUSB-MATRIX input
  - ANIUSB-MATRIX output to MXA901 AEC reference input
  - ANIUSB-MATRIX output to MXN-AMP input

3. Send audio from the ANIUSB-MATRIX to other sources using the ANIUSB-MATRIX's matrix mixer. Open the ANIUSB-MATRIX web application with Shure Update Utility. A common destination is a computer connected by USB with video-conferencing software (such as Zoom or Microsoft Teams).

## Step 3: Listen and Adjust

1. Connect the computer with videoconferencing software (such as Zoom or Microsoft Teams) to the ANIUSB-MATRIX's USB port.
2. Open the videoconferencing software on the computer and choose ANIUSB-MATRIX as the speaker and microphone.
3. Place a test call with the whole system. Adjust gain, EQ, and DSP as needed.

## About the Shure MXN-AMP

The MXN-AMP is a PoE-powered multichannel power amplifier designed for speech and program audio reproduction in meeting rooms. The MXN-AMP can drive up to 4 low-impedance loudspeakers or 1 series of 70/100-volt loudspeakers.

The MXN-AMP provides 4 Dante input and output channels. It also has 2 analog audio inputs (derived from a single 3.5mm TRS connector). Onboard Shure DSP utilities include EQ, delay, limiter, and a signal/tone generator. The MXN-AMP features Shure-designed loudspeaker presets for all MXP-series loudspeakers to ensure optimal audio performance. Custom device setting presets can also be defined in the MXN-AMP control software, and a logic input is provided to enable remote switching between device presets 1 and 2.

The MXN-AMP is a Shure secure networked endpoint, so audio is encrypted between the MXN-AMP and other Microflex Ecosystem devices in the room. The MXN-AMP can be rack-mounted with the available CRT-1 rack shelf and is plenum-rated for mounting above the ceiling.

## Compatible Shure Loudspeakers

- MXP-1 Microflex Mini Pendant Passive Loudspeaker ([User Guide](#))
- MXP-3 Microflex Wall Mount Passive Loudspeaker ([User Guide](#))
- MXP-5 Microflex Ceiling Passive Loudspeaker ([User Guide](#))
- MXP-6 Microflex Pendant Passive Loudspeaker ([User Guide](#))

# MXN-AMP Parts

1. Dante/PoE+ RJ45 port
2. Reset button

Reset options:

## Network reset (press button for 4-8 seconds)

Resets all Shure control and audio network IP settings to factory defaults. Audio and PoE+ LEDs flash green.

## Full factory reset (press button for longer than 8 seconds)

Resets all network and Designer settings to the factory defaults. All LEDs flash green, then solid green after 8 seconds.

3. LED indicators

**All lights flashing green:** Hardware identification

## Audio LED Status

| Audio Light Status  | Activity                    |
|---------------------|-----------------------------|
| <b>Solid green</b>  | Audio on at least 1 channel |
| <b>Solid yellow</b> | Device muted                |
| <b>Off</b>          | No audio on any channels    |

## PoE+ LED Status

| PoE+ Light Status   | Activity             |
|---------------------|----------------------|
| <b>Solid green</b>  | Device is using PoE+ |
| <b>Solid yellow</b> | Firmware update      |
| <b>Off</b>          | Device is using PoE  |

## 70V Mode LED Status

| 70V Light Status   | Activity    |
|--------------------|-------------|
| <b>Solid green</b> | In 70V mode |

| 70V Light Status | Activity                              |
|------------------|---------------------------------------|
| Off              | Not in 70V mode. Device in LoZ mode.* |

## Power LED Status

| Power Light Status | Activity            |
|--------------------|---------------------|
| Solid green        | Device on and ready |
| Flashing red       | Error               |

4. Logic input
5. 3.5 mm TRS audio line input (stereo line in)
6. Low impedance loudspeaker outputs
7. 70V loudspeaker output
8. Block connectors

\*LoZ mode is the default. Switch to 70V mode in the control software.

## What's in the Box

| Item                             | Part Number      |
|----------------------------------|------------------|
| Amp box                          | MXN-AMP          |
| 1 logic input block connector    | Dinkle 2ESDV-03P |
| 4 LoZ output block connectors    | Dinkle 2ESDV-02P |
| 1 70V output block connector     | Dinkle 7ESDV-02P |
| 2 ¼ in. screws, #4-40 UNC thread | 30C1224G         |

## Block Pin Assignments

### Block Pin Assignments

| Symbol | Assignment        |
|--------|-------------------|
| +      | Loudspeaker out + |
| —      | Loudspeaker out - |
| in     | Logic in          |
| n/c    | Not connected     |
| ⊥      | Logic ground      |

# MXN-AMP Specifications

## Power Input

Power over Ethernet (PoE) or PoE+ over RJ45 (48 V = 25.5 W MAX)

## Weight

2.43 lbs (1.1kg)

## Product Dimensions

7.95 x 7.01 x 1.57 in. (202 x 178 x 40 mm) L x W x H

## Amplifier Class

D

## Audio Inputs

4 Dante in, 1 3.5 mm TRS connector with two audio line level inputs

## Control Input

1 logic in

## Audio Outputs

4 Dante output channels, 4 LoZ loudspeaker outputs, 1 70V loudspeaker output

## Frequency Response

20 Hz to 20 kHz

## Sample Rate

48 kHz

## Bit Depth

24

## Latency

*Analog to analog*

2.2 ms typical, 2.5 ms max (add 1 ms for Dante)

## Signal-To-Noise Ratio

110 dB max

## Output Level/Total Harmonic Distortion (THD)

*at 1 kHz*

THD less than 0.05% (0.01% typical)

## Power Consumption

|             |             |
|-------------|-------------|
| <b>PoE</b>  | 12.95 W max |
| <b>PoE+</b> | 25.5 W max  |

## Power Requirements

PoE (Class 0) or PoE+ (Class 4)

## Output Power per Channel

|                 |        |
|-----------------|--------|
| <b>LoZ Mode</b> | 3.25 W |
| <b>70V Mode</b> | 14.5 W |

## Operating Temperature Range

-7 to 40°C (19.4 to 104°F)

## Storage Temperature Range

-29 to 74°C (-20 to 165°F)

## Plenum Rating

Suitable for use in air plenums per NEC section 300.22(c) and/or IMC section 602.

## Cable Requirements

Cat 5e or higher (shielded cable recommended)

## Block Connector Type

|                    |                                                            |
|--------------------|------------------------------------------------------------|
| <b>Logic Input</b> | 3-pin connector, 0.2 in. (5.08mm) pitch, Dinkle 2ESDV-03P  |
| <b>LoZ Output</b>  | 2-pin connector, 0.2 in. (5.08mm) pitch, Dinkle 2ESDV-02P  |
| <b>70V Output</b>  | 2-pin connector, 0.295 in. (7.5mm) pitch, Dinkle 7ESDV-02P |

## Control Software

Shure Designer

# Install the MXN-AMP

You can mount the amplifier under a table, on a wall, or to any flat surface. Secure the keyholes (5 x 21 mm, 8 mm at the widest point) on each side with appropriate hardware.

## Rack Tray Mounting

You can also mount the MXN-AMP in the **CRT1 19" Rack Tray (optional accessory)** in a rack or under a table. The CRT1 supports the MXN-AMP and an additional device (MXN-AMP, P300, ANI4IN, ANI4OUT, ANI22, or ANIUSB-MATRIX).

## Securing the Devices

Use the included screws from the mounting hardware kit to secure each MXN-AMP, P300, or Audio Network Interface (ANI) device. Devices can be mounted to face either direction. Insert the screws from the bottom in the appropriate holes.

## Rack Ear Configuration (CRT1)

The adjustable rack ears support mounting in a standard equipment rack or underneath a table.

### Standard 19" Rack Mount

1. Align the ears with the mounting holes pointed forward.
2. Install the screws that hold the ear to the tray as shown.

### Under-Table Mounting

1. Align the ears with the mounting holes pointed upward.
2. Install the screws that hold the ear to the tray as shown.

# Connect to Power

The MXN-AMP can use Power over Ethernet (PoE) or Power over Ethernet Plus (PoE+). Each option has different capabilities:

- PoE+ powers up to 4 low impedance loudspeakers or a series of 70-volt loudspeakers. (Loudspeaker model and tap settings determine how many 70-volt loudspeakers are supported.)
- PoE powers up to 2 low impedance loudspeakers and cannot power 70-volt loudspeakers.

Use one of the following to provide PoE or PoE+:

- Network switch with PoE or PoE+
- PoE or PoE+ injector device

**Note:** To use Dante, your PoE/PoE+ source must also be a Dante-compatible gigabit device.

## Connect Loudspeakers to MXN-AMP

**Note:** LoZ and 70V outputs can't be used at the same time. To switch output settings, adjust the settings in the control software or factory reset the amplifier.

### Low Impedance Loudspeakers

To connect low impedance loudspeakers, use the LoZ outputs. You can add up to 4 loudspeakers, 1 for each output. Wire positive to positive and negative to negative.

### 70-Volt Loudspeakers

To connect 70V loudspeakers, use the 70V output.

1. Adjust the tap settings on your loudspeakers. ([See more on choosing tap settings.](#))
2. Wire the amplifier to the first loudspeaker, positive to positive and negative to negative.
3. Wire remaining loudspeakers in parallel, positive to positive and negative to negative.

## Amplifier Input and Output Channels

### Input Channels

The amplifier has 4 Dante input channels. You can set channels 3 and 4 to be dual mono analog inputs or Dante inputs.

Input channels are useful for sending a far-end signal and program audio to your loudspeakers.

Use the Dante input channels to sum and send Dante signals to loudspeakers. Use the stereo analog input channels to send analog signals to loudspeakers.

### Output Channels

The amplifier has 4 Dante output channels. The output channels are useful for sending signal to another amplifier, an AEC reference channel, or an active loudspeaker.

There are 2 processing options for the Dante output signal:

#### Pre-DSP

Sends a pre-DSP signal to the Dante output. (DSP is still applied to the loudspeaker output.)

You may want pre-DSP to send an unprocessed signal to another amplifier. This option prevents DSP blocks from stacking on top of each other.

#### Post-DSP

Sends a post-DSP signal to the Dante output.

You may want post-DSP if you have lots of processing for passive loudspeakers or if you want to send processed signal to an active loudspeaker or an AEC reference channel.

## Switch between LoZ and 70V Modes

The amp's LoZ and 70V outputs can't be used at the same time. The default mode is LoZ, but you can switch output modes in the control software.

If you have a small to medium room, have short cable runs, and need more audio channels, consider LoZ mode. In LoZ output mode:

- The 4 LoZ loudspeaker outputs are on.

**Important:** You need PoE+ to power more than 2 LoZ loudspeaker outputs.

- The 70V loudspeaker output is turned off.
- Each Dante or analog input can be summed and routed to any LoZ loudspeaker output.
- The signal generator can be routed to any LoZ loudspeaker output.

If you have a larger room, have longer cable runs, and only need 1 amp channel, consider 70V mode. In 70V output mode:

- The 70V loudspeaker output is on.

**Important:** You need PoE+ to switch to 70V mode.

- The LoZ loudspeaker outputs are turned off.
- Dante and analog inputs can be summed and routed to the 70V loudspeaker output.
- The signal generator can be routed to the 70V loudspeaker output.

You can switch output modes without losing your settings.

---

## Firmware Updates

Use the Shure Update Utility (SUU) to update device firmware. Keep device firmware updated to take advantage of additional features and improvements.

Download the most recent version of the SUU from [shure.com/SUU](https://shure.com/SUU).

---

## Adjust DSP Settings

### Use Loudspeaker Presets

Loudspeaker presets are on the Outputs page of the control software.

- For Shure MXP-series passive loudspeakers, select your loudspeaker.
- For other loudspeakers, select Generic.

**Note:** To adjust EQ and other DSP settings for your passive loudspeakers, go to the MXN-AMP's Outputs page.

## Parametric Equalizer

Maximize audio quality by adjusting the frequency response with the parametric equalizer.

Common equalizer applications:

- Improve speech intelligibility
- Reduce noise from HVAC systems or video projectors
- Reduce room irregularities
- Adjust frequency response for reinforcement systems

### Setting Filter Parameters

Adjust filter settings by manipulating the icons in the frequency response graph, or by entering numeric values. Disable a filter using the checkbox next to the filter.

### PEQ Filter Settings

| Setting            | Function                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Filter Type</b> | <p>Only the first and last band have selectable filter types.</p> <p><b>Parametric:</b> Attenuates or boosts the signal within a customizable frequency range</p> <p><b>Low Cut:</b> Rolls off the audio signal below the selected frequency</p> <p><b>Low Shelf:</b> Attenuates or boosts the audio signal below the selected frequency</p> <p><b>High Cut:</b> Rolls off the audio signal above the selected frequency</p> <p><b>High Shelf:</b> Attenuates or boosts the audio signal above the selected frequency</p> |
| <b>Frequency</b>   | Select the center frequency of the filter to cut or boost                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Setting | Function                                                                                                                                                                                                                                               |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gain    | Adjusts the level for a specific filter (+/- 18 dB)                                                                                                                                                                                                    |
| Q       | Adjusts the range of frequencies affected by the filter. As this value increases, the bandwidth becomes thinner.                                                                                                                                       |
| Width   | Adjusts the range of frequencies affected by the filter. The value is represented in octaves.<br><br><b>Note:</b> The Q and width parameters affect the equalization curve in the same way. The only difference is the way the values are represented. |

## Copy and Paste Equalizer Channel Settings

Use to quickly apply the same PEQ setting across multiple channels.

1. Select the PEQ of the desired channel.
2. Click copy.
3. Select the channel to apply the PEQ setting to and click paste.

## Equalizer Applications

Conferencing room acoustics vary based on room size, shape, and construction materials. Use the guidelines in following table.

### Uses for EQ

| EQ Application                                          | Suggested Settings                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Treble boost for improved speech intelligibility</b> | Add a high shelf filter to boost frequencies greater than 1 kHz by 3-6 dB                                                                                                                                                                                                                                                                                                                                                                              |
| <b>HVAC noise reduction</b>                             | Add a low cut filter to attenuate frequencies below 200 Hz                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Reduce flutter echoes and sibilance</b>              | <p>Identify the specific frequency range that "excites" the room:</p> <ol style="list-style-type: none"> <li>1. Set a narrow Q value.</li> <li>2. Increase the gain to between +10 and +15 dB, and then experiment with frequencies between 1 kHz and 6 kHz to pinpoint the range of flutter echoes or sibilance.</li> <li>3. Reduce the gain at the identified frequency (start between -3 and -6 dB) to minimize the unwanted room sound.</li> </ol> |
| <b>Reduce hollow, resonant room sound</b>               | <p>Identify the specific frequency range that "excites" the room:</p> <ol style="list-style-type: none"> <li>1. Set a narrow Q value.</li> <li>2. Increase the gain to between +10 and +15 dB, and then experiment with frequencies between 300 Hz and 900 Hz to pinpoint the resonant frequency.</li> <li>3. Reduce the gain at the identified frequency (start between -3 and -6 dB) to minimize the unwanted room sound.</li> </ol>                 |

## Delay

If you're installing loudspeakers in a large area, you may need to time-align some speakers using delay. This ensures that the signal arrives to all parts of the room at the same time for even coverage.

## Limiter

Use the limiter to prevent output signals from clipping or distorting. To use, enter a dBFS value for the threshold. With the limiter enabled, the output signals will not exceed the threshold.

## Signal Generator

The signal generator plays 4 different signals to help you tune your system and balance sound levels. Dante inputs get bypassed when you use the signal generator. The signal generator is pre-EQ, so you can apply EQ to the signal.

Gain adjustment at 0 dB is referenced to 76 dB SPL at 1 meter.

### Pink noise

Equal energy per octave. Use to check levels and to verify coverage in multi-speaker installations.

## White noise

Equal energy at each frequency. Use to check levels and to verify coverage in multi-speaker installations.

## Sine wave

Plays a tone at the selected frequency. Use to check levels, assess comb filtering effects, and identify possible standing waves.

## Sweep

Plays a tone at every frequency that the loudspeaker can reproduce, starting from the lowest frequency and sweeping up to the highest. Use to identify possible mounting deficiencies, such as rattling or buzzing.

# Mute the Amplifier and Loudspeakers

You can mute the amplifier at 4 points:

1. **Device mute:** Mutes the whole device. The mute icon on the Routing page is for device mute.
2. **Input mute:** Mutes the selected Dante or analog input channel. [Your device] > Inputs
3. **Loudspeaker output mute:** Mutes the loudspeaker output. [Your device] > Outputs
4. **Dante output mute:** Mutes the Dante output channel. [Your device] > Outputs.

**Note:** You can also find all these mute points on the amplifier's Schematic page.

# Manage Devices in ShureCloud

Use [ShureCloud](#) to remotely view information about supported devices.

Refer to the ShureCloud user guide to learn [how to add devices to your ShureCloud account](#).

# Save and Apply Presets

When your devices are set up for a given room, you might want to save specific settings as a preset. Presets are also useful in a multipurpose or divisible room with different configurations. When the room configuration changes, you can apply a preset from 1 of the 10 preset slots available.

- **Designer room presets:** retain the settings of each device in the room
- **Device presets:** retain the settings of a particular device

## Save Settings as Presets:

1. Select  (Presets)
  - For Designer room presets, this is on the routing and coverage pages.

- For device presets, double-click a virtual or online device and then choose presets.

2. Select an open preset slot.
3. Enter a name for the preset.
4. Click Save.

## Apply Presets

1. Open the presets view .
2. Choose the preset you want.
3. Select Apply. The applied preset has a check mark next to it.

### Notes:

- Routing information is not saved in presets.
- If your room is online, preset activity may cause the audio to momentarily drop out.
- Any changes made after applying a preset are not saved to that preset. Save new settings to a new preset slot or overwrite the old preset.
- A preset name conflict happens when 2 or more devices have a different name in the same preset slot. When there's a conflict, you can still pass audio, adjust settings, and create presets. To resolve the conflict, you can rename, overwrite, or clear the preset slot.

## Export Virtual Device Presets

You can export a virtual device's settings as a preset file (.json). This allows you to import and apply that preset to an online device in its web application.

1. Double-click the virtual device.
2. Go to the presets view.
3. Select Export.

## Switch between Presets with Logic

The logic control input lets you switch between presets 1 and 2 on the amplifier with switch/contact closure or a third-party control system. When the MXN-AMP receives a 0–5V TTL signal, it automatically switches presets.

**Important:** Make all logic ground connections to the ground pin, including power supply ground of external logic circuitry. To avoid switch clicks, do not connect logic ground to audio, chassis, or rack grounds.

## Default Settings

| Logic      | Description                                                                                                                             | Preset   |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------|----------|
| Logic high | Nothing connected or logic signal changes from low to high.                                                                             | Preset 1 |
| Logic low  | Voltage lowered with switch/contact closure, voltage lowered with third-party control system, or logic signal changes from high to low. | Preset 2 |

You can also map preset 1 to logic low and preset 2 to logic high. Set up switching behavior and presets in the control software.

**Important:** Logic switch settings are included in device presets 1 and 2. To properly use the logic switch:

1. Turn on and set up logic: [Your device] > Settings > Operation Mode
2. Save device presets 1 and 2 to ensure all logic switch settings are the same for both presets: [Your device] > Presets

These presets apply to audio settings, not network, security, or system settings. Your preset also remains after a power cycle.

## Shure Audio Encryption

Audio is encrypted with the Advanced Encryption Standard (AES-256), as specified by the US Government National Institute of Standards and Technology (NIST) publication FIPS-197.

Audio encryption is only supported among Shure devices. It is not supported with third-party devices.

**Important:** For encryption to work:

- Devices must be online and support encryption.
- Encryption must be turned on for all devices in the room.
- You must disable AES67 in Dante Controller. AES67 and AES-256 can't be used at the same time.

To turn on encryption:

In an online room, select  > Audio encryption > Turn on encryption. You can auto generate a key or enter one manually.

To re-key or turn off encryption:

In an online room, select  > Audio encryption and enter any passwords.

## Set Up the 802.1X Protocol for a Device

Select Shure devices support the IEEE 802.1X port access protocol for network authentication.

**Important:** To use the 802.1X security protocol with Shure devices, set the network switch to multiple host authentication. You must also make accommodations to allow the audio network interface to connect to the network. The audio network interface doesn't support the 802.1X protocol.

Setting up 802.1X is a two-part process.

**To set up 802.1X, you will need:**

- Details about your authentication server's EAP method
- Any required credentials or certificates for that method, for example:
  - MD5 and PWD
    1. User ID and passphrase
  - TLS and PEAP
    1. User ID and passphrase
    2. Certificate (with certificate types) in the .PEM format
- Any passwords to access the devices if they are password locked

## Step 1: Configure Settings on Test Network

1. Connect the device to your test network and discover it using Designer.
2. Initialize the device if necessary. Open the device and go to **Settings > Network > 802.1X**.
3. Choose your EAP method from the menu.
4. Enter any required credentials and load any necessary certificates.
5. Press **Save** to save the 802.1X settings to the device.
6. Enable 802.1X and select **Reboot later**.

## Step 2: Connect to a Credentialed Network

1. Connect your device to the credentialed network.
2. Ensure that Designer is connected to the credentialed network.
3. Go to **Settings > Network > 802.1X** and enable 802.1X. Reboot the device for the 802.1X settings to take effect.
4. If the device doesn't appear in Designer after the reboot, reconnect to the test network and check all 802.1X settings for the selected EAP method.

## Turn Off or Clear 802.1X Settings

You can turn off 802.1X settings temporarily, or clear them from the device. Open the device and go to **Settings > Network > 802.1X**

- **Disable:** Click the 802.1X switch to turn off 802.1X settings. Click the switch again to enable 802.1X.
- **Clear:** Click **Clear 802.1X settings** to remove 802.1X settings from the device.

**Note:** Resetting to factory default clears all 802.1X settings.

## Change 802.1X Settings

You may need to change a device's 802.1X settings if the enterprise's 802.1X settings are changing. The best way to do this is to change the 802.1X settings on the devices, and then make changes to the authentication server.

**To change device settings:**

1. While still connected to the credentialed network, find the device in Designer and go to **Settings > Network > 802.1X**.
2. Make changes and click **Save**.
3. Make any changes to the authentication server.
4. Reboot your devices. The devices should connect to the credentialed network with the updated 802.1X settings.

## Troubleshooting 802.1X Setup Issues

If the device doesn't appear in Designer on the credentialed network, there's a problem with the device's 802.1X settings. To troubleshoot, take the device off the credentialed network and connect it to the test network. You can make any necessary changes to the 802.1X settings, and then reconnect to the credentialed network.

If you attempt to enable 802.1X on a device, but the authentication fails, you will see this notification:

If this occurs, check with your system administrator.

---

## Use Command Strings

This device receives logic commands over the network. Many parameters controlled through Designer can be controlled using a third-party control system, using the appropriate command string.

### Common applications:

- Mute
- LED color and behavior
- Loading presets
- Adjusting levels

A complete list of command strings is available at:

<https://www.shure.com/en-US/docs/commandstrings/MXN-AMP>.

---

## MXN-AMP Signal Path Diagram

The following diagram shows the signal path for the MXN-AMP. Use Designer or the web application to adjust DSP or [change output modes](#).

## Notes

If you are using Dante output channels in LoZ mode:

- Pre-DSP signals do not go through the matrix mixer. Signals are sent from the Dante input to the respective output channel (Dante in 1 to Dante output 1, Dante in 2 to Dante output 2, etc.).
- Post-DSP signals are sent from the LoZ output to the respective Dante output channel (LoZ output 1 to Dante output 1, LoZ output 2 to Dante output 2, etc.).

In 70V mode:

- Processing for output channels 1-4 is turned off.
- Pre-DSP signals do not go through the matrix mixer. Signals are sent from the Dante input to the respective output channel (Dante in 1 to Dante output 1, Dante in 2 to Dante output 2, etc.).
- Post-DSP signals are sent from the 70V output channel to all Dante output channels.

[Learn more about the amplifier's output channels and pre- and post-DSP.](#)

# Troubleshoot the Shure MXN-AMP

## Troubleshooting

| Problem                                                                  | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>No sound</b>                                                          | <p>Check cables and connections. # Safety and Regulatory Information for Wireless Products

## Important Safety Instructions

1. READ these instructions.
2. KEEP these instructions.
3. HEED all warnings.
4. FOLLOW all instructions.
5. DO NOT use this apparatus near water.
6. CLEAN ONLY with dry cloth.
7. DO NOT block any ventilation openings. Allow sufficient distances for adequate ventilation and install in accordance with the manufacturer's instructions.
8. DO NOT install near any heat sources such as open flames, radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat. Do not place any open flame sources on the product.
9. DO NOT defeat the safety purpose of the polarized or grounding type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wider blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. PROTECT the power cord from being walked on or pinched, particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. ONLY USE attachments/accessories specified by the manufacturer.
12. USE only with a cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

13. UNPLUG this apparatus during lightning storms or when unused for long periods of time.

14. REFER all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
15. DO NOT expose the apparatus to dripping and splashing. DO NOT put objects filled with liquids, such as vases, on the apparatus.
16. The MAINS plug or an appliance coupler shall remain readily operable.
17. The airborne noise of the Apparatus does not exceed 70dB (A).
18. Apparatus with CLASS I construction shall be connected to a MAINS socket outlet with a protective earthing connection.
19. To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.
20. Do not attempt to modify this product. Doing so could result in personal injury and/or product failure.
21. Operate this product within its specified operating temperature range.
22. Follow local regulations and consult qualified personnel if the product installation or relocation requires construction work. Choose mounting hardware and an installation location that can support the weight of the product. Avoid locations subject to constant vibration. Use the required tools to install the product properly. Inspect the product periodically.

**WARNING:**

- Voltages in this equipment are hazardous to life. No user-serviceable parts inside. Refer all servicing to qualified service personnel. The safety certifications do not apply when the operating voltage is changed from the factory setting.
- If water or other foreign objects enter the inside of the device, fire or electric shock may result.

## Regulatory Information for Class A EMC Products

### EU Class A Warning

This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

### CE Notice

Hereby, Shure Incorporated declares that this product with CE Marking has been determined to be in compliance with European Union requirements.

The full text of the EU declaration of conformity is available at the following site: <https://www.shure.com/en-EU/support/declarations-of-conformity>.

### UKCA Notice

Hereby, Shure Incorporated declares that this product with UKCA Marking has been determined to be in compliance with UK-CA requirements.

The full text of the UK declaration of conformity is available at the following site: <https://www.shure.com/en-GB/support/declarations-of-conformity>.

### UK Cybersecurity

#### **UK SI 2023 NO. 1007 STATEMENT OF COMPLIANCE**

**Product Type:** Relevant connectable products as defined by The Product Security and Telecommunications Infrastructure (Security Requirements for Relevant Connectable Products) Regulations 2023.

**Manufacturer Statement:** We, Shure Incorporated, certify and declare as manufacturer under our sole responsibility, that the above mentioned product(s) conform(s) to Schedule 2 of the essential requirements of the listed applicable United Kingdom Statutory Instruments (including their amendments) and the associated norms.

**Information on how to report security issues:** The latest version of Shure's Disclosure policy can be found at the following link: <https://www.shure.com/en-GB/about-us/security>

**Security update periods:** Shure provides support regarding hardware and software updates that continue the integral cyber security safety of Shure products up to 24 months after end of life (AEOL). For the full statement regarding Shure's product support policy, and information regarding products end of life status information can be found at the following link: <https://www.shure.com/en-GB/about-us/security>

**Manufacturer:**

Shure Incorporated 5800 Touhy Avenue

Niles, Illinois, 60714-4608 U.S.A.

Website: [www.Shure.com](http://www.Shure.com).

**Technical documentation is kept at:**

Shure Incorporated, Corporate Global Compliance Engineering Division

**UK Importer/Representative:**

Shure UK Limited

Unit 2, The IO Centre, Lea Road, Waltham Abbey, Essex, EN9 1AS, U.K.

Phone: +44 (0)1992 - 703058

Email: [EMEAsupport@shure.de](mailto:EMEAsupport@shure.de)

**On behalf of Manufacturer:**

Chad Ayers

01 February 2024 Niles, Illinois

Senior Director, Global Compliance

## FCC Notice

This product has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instruction manual, may cause harmful interference with radio communications. Operation of this product in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

**Notice:** The FCC regulations provide that changes or modifications not expressly approved by Shure Incorporated could void your authority to operate this equipment.

For information regarding responsible party and other matters relating to FCC compliance, please contact Shure Incorporated, 5800 W. Touhy Avenue, Niles, Illinois 60714-4608 U.S.A. [shure.com/contact](http://shure.com/contact)

## Canada, ISED Notice

**Notice:** The Industry Canada regulations provide that changes or modifications not expressly approved by Shure Inc. could void your authority to operate this equipment.

This Class A digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

## KCC Notice

이 기기는 업무용 환경에서 사용할 목적으로 적합성평가를 받은 기기로서 가정용 환경에서 사용하는 경우 전파간섭의 우려가 있습니다.

## CNCA Notice

**警告使用者：** 此为A级产品。在生活环境中，该产品可能会造成无线电干扰。在这种情况下，可能需要用户对其干扰采取切实可行的措施。

## BSMI Notice

警告：

為避免電磁干擾，本產品不應安裝或使用於住宅環境。

# Environmental Regulatory Information

## Registration, Evaluation, Authorization of Chemicals (REACH) Directive

REACH (Registration, Evaluation, Authorization of Chemicals) is the European Union (EU) and the United Kingdom (UK) chemical substances regulatory framework. Information on substances of very high concern contained in Shure products in a concentration above 0.1% weight over weight (w/w) is available upon request.

## Waste Electrical and Electronic Equipment (WEEE) Directive

In the European Union and the United Kingdom, this label indicates that this product should not be disposed of with household waste. It should be deposited at an appropriate facility to enable recovery and recycling.

## BSMI Notice

有關於台灣進口商的資訊，請參考產品標籤上的BSMI檢驗標識號碼（例如：R35393代表益誠國際驗證股份有限公司/臺北市中山區長安東路2段108號7樓之5）

## Recycling Information

Please consider the environment, electric products and packaging are part of regional recycling schemes and do not belong to regular household waste.
