

POWER

Clean Power and Ultimate Protection

Power-1 (220-240V)

240V Surge Suppressor & Power Conditioner

Designed without compromise by Radial

The Power-1 220-240V rackmount power supply and surge suppressor gives musicians, engineers, producers, studio owners, commercial facilities, and anyone working with valuable electronic equipment protection from power surges that can damage or destroy music equipment instantaneously.

The Power-1 utilizes a high quality MOV (Metal Oxide Varistor) for superior surge protection, with an LED indicator on the front panel that illuminates to show that any connected equipment is protected. Additionally, a high-rejection RF filter is used to keep high frequencies and AM radio signals out of the power line, preventing contamination of audio signals.

A total of ten rear panel outlets are provided, along with three front panel outlets and a USB charging port to easily power personal devices. A heavy-duty power on/off toggle switch, rugged outlet connectors, and steel construction ensure that the Power-1 performs night after night without fail.

POWER-1

Features

- 220-240V operation for international markets
- 3 'always on' front panel outlets
- 10 switchable rear panel outlets
- USB charging port (5V/1A)

Benefits

- Premium MOV (Metal Oxide Varistor)
- Surge protection with LED indicator
- RF interference filter to prevent signal contamination
- Powers & protects connected equipment
